

Health Professional Listing: WI, MN, IL

This list of Tinnitus Health Professionals is comprised of individuals, from a variety of fields, who have stated to ATA that they have an interest and active involvement in treating tinnitus patients. ATA OFFERS THIS LIST SOLELY AS AN INFORMATIONAL AID AS YOU ANALYZE YOUR NEEDS FOR MEDICAL ASSISTANCE. ATA MAKES NO RECOMMENDATIONS OR REPRESENTATIONS AS TO THE INDIVIDUALS LISTED HEREIN. You, as a prospective patient, should first call and speak with the health provider of your choice, ask those questions you deem appropriate, and then decide for yourself if there is a match of needs and services.

HOW TO USE THE AMERICAN TINNITUS ASSOCIATION HEALTH PROFESSIONAL LISTING

The ATA Health Professional Listing is offered as one resource to help you make successful healthcare choices. Please consider the Listing a “starting point” rather than any kind of referral list.

The individuals on the following pages have indicated to ATA that they are interested in providing services and treatments to tinnitus patients. Whether or not a particular professional or treatment is right for you depends on many factors. Different treatments work for different people.

Consider the following suggestions when selecting a healthcare professional, and then work with that professional to find the treatment or combination of treatments that works best for you. Regardless of which treatment you choose, your first step when making a healthcare decision should be to receive medical and audiological evaluations.

ATA makes no recommendations or representations as to the individuals listed or to their respective treatments.

Some questions to ask when selecting a healthcare professional:

Which tinnitus treatments do you use in your practice—and why? Look for a healthcare professional who is aware of effective treatment options, but who also wants to find the treatment most appropriate for you. Some professionals may have very good reasons for offering certain treatments, but not others, in their practices. Listen to their experiences with different treatments. Do they specialize in a particular treatment?

What is the success rate of the proposed treatment? A high success rate does not necessarily mean that a certain treatment is for you, but it could help you select appropriate care. Consider how different treatments might work in combination with each other. Does the healthcare professional have ideas about why a specific treatment might work well for you? If the healthcare professional offers a complete cure of your tinnitus, you may have cause for concern. Instead, find out potential benefits of different treatments: relief, lessening of tinnitus, habituation of tinnitus, etc.

What is the definition of success? Since there are many different strategies for relief, you may want to find a professional who has suggestions on successful and realistic goals for you. Is success complete habituation, noticeable relief, better coping capacity, or something else?

What tests do you require or suggest? Your healthcare professional should have different ways to evaluate you, your hearing, and your tinnitus. Find out what he or she suggests—and what each of the tests are supposed to reveal.

Are you a member of the American Tinnitus Association? As members, health professionals receive the ATA quarterly journal, *Tinnitus Today*, which helps to keep them up to date on the latest research and treatment news.

Questions to discuss on your first visit to your new healthcare professional:

What are the risks or side effects of this treatment, test, or medication? Treatments can affect you in different ways. Often, just knowing in advance what you should expect from your treatment will help you to respond more favorably. Be sure to ask what/why/how, and insist on clear answers. And ask about the risks and benefits of different tests.

When can I expect to see results? Some treatments take longer than others. Understand the timeline for results, and make certain you understand and can follow your health professional’s instructions. Take notes!

How much will my tinnitus evaluation cost? How much will tinnitus devices cost if they are recommended? Because insurance coverage can vary considerably, ask your health professional for the costs of treatment. He or she may not be able to give you an exact figure, but together you can estimate costs for your treatment and discuss coverage with your health plan.

Things to do on your own to help or improve your tinnitus:

- Keep a log of what helps and what worsens your tinnitus—including foods, medications, and stress. Try modifications where necessary.
- Maintain a file of all visits to healthcare professionals and the services you received.
- Research other sources of professional information, like the American Medical Association’s “AMA Physician Select,” the American Board of Medical Specialties, or your state’s medical licensing board.
- Join a tinnitus Self-Help Group led by a knowledgeable facilitator.
- Join the American Tinnitus Association.
